ACCESSORIES FOR

THE 5-in-1 POWER TOOL

## TABLE RAISING ASSEMBLY

SHOPS MITH Table Raising Assembly can be installed quickly and easily. All SHOPS MITH carriages are drilled and tapped to fit the  $\frac{1}{2}$ " cap screw supplied with this assembly. Ruggedly made of cast iron and machined steel, it gives precision adjustment to the table.

## TABLE RAISING ASSEMBLY

SHOPS MITH Table Raising Assembly provides accurate, micro adjustment of table height, combined with rapid positioning. Table is raised quickly to a position near the desired setting. It can then be raised by a screw adjustment to the precise setting required. No slow, tedious cranking to move the table up and down, but precision where precision is needed.

In SHOPS MITH's horizontal position, the Table Raising Assembly provides accurate groove depth when dadoing. In the horizontal drill press position it facilitates centering the drill to hit a marked point, and makes adjustments for routing or mortising simple and quick.

In the SHOPS MITH vertical position, the Table Raising Assembly can be used for linear adjustment when setting up a precise drilling job.
