

## Most of the Shopsmith Arbors not including the Shaper Spindles and Router Chucks

**Shopsmith 1/2", 5/8" & 1-1/4" Arbors**

The picture above shows most of the Arbors made for the Shopsmith Model 10's and Mark Series machines made over the years from 1947 to present. I still need to redo this picture to include the missing Arbors. They are 27 030 which is the same as 505505 without the black protective coating. 505505 version 2 which has a larger diameter base which apparently changed just before it was discontinued and was replaced by 555117 1/2" Shaper Arbor with the set of 4 rub collars replacing the machined spacer and 2 machined washers. 505511 version 2 which has a beveled top instead of the original rounded top. 515462 the Biscuit Joiner Blade Arbor (Part # is for the base part only-has 3 more parts, set screw, screw and top washer) I cannot find a part number for the whole assembly.

The Sawsmith 1-1/4" only Arbors are not shown but are 27032 in 2 versions, 505512 and 555572 which looks like 555608 with a raised 1-1/4" ring on the base under the nut. 555608 was also for use on the Sawsmith.
