SST SHIM, .002"

ROLL THE SHIM  
INTO THE BORE

A photograph of a mechanical assembly, likely a hinge, mounted on a wooden workbench. The assembly consists of a grey metal bracket with two horizontal arms. A black strap with a white dotted pattern is wrapped around the central part of the bracket. A coiled spring is visible on the left side. Above the bracket, several hardware components are laid out: a long black pin, a shorter black pin, a long black threaded rod with a hex nut at one end, two black washers, and a hex nut. The background is a wooden workbench with some visible wear and a white cloth in the bottom right corner.
